Kirby Inu

MCSE based on Shiba Inu

10% ETH rewards for holding!
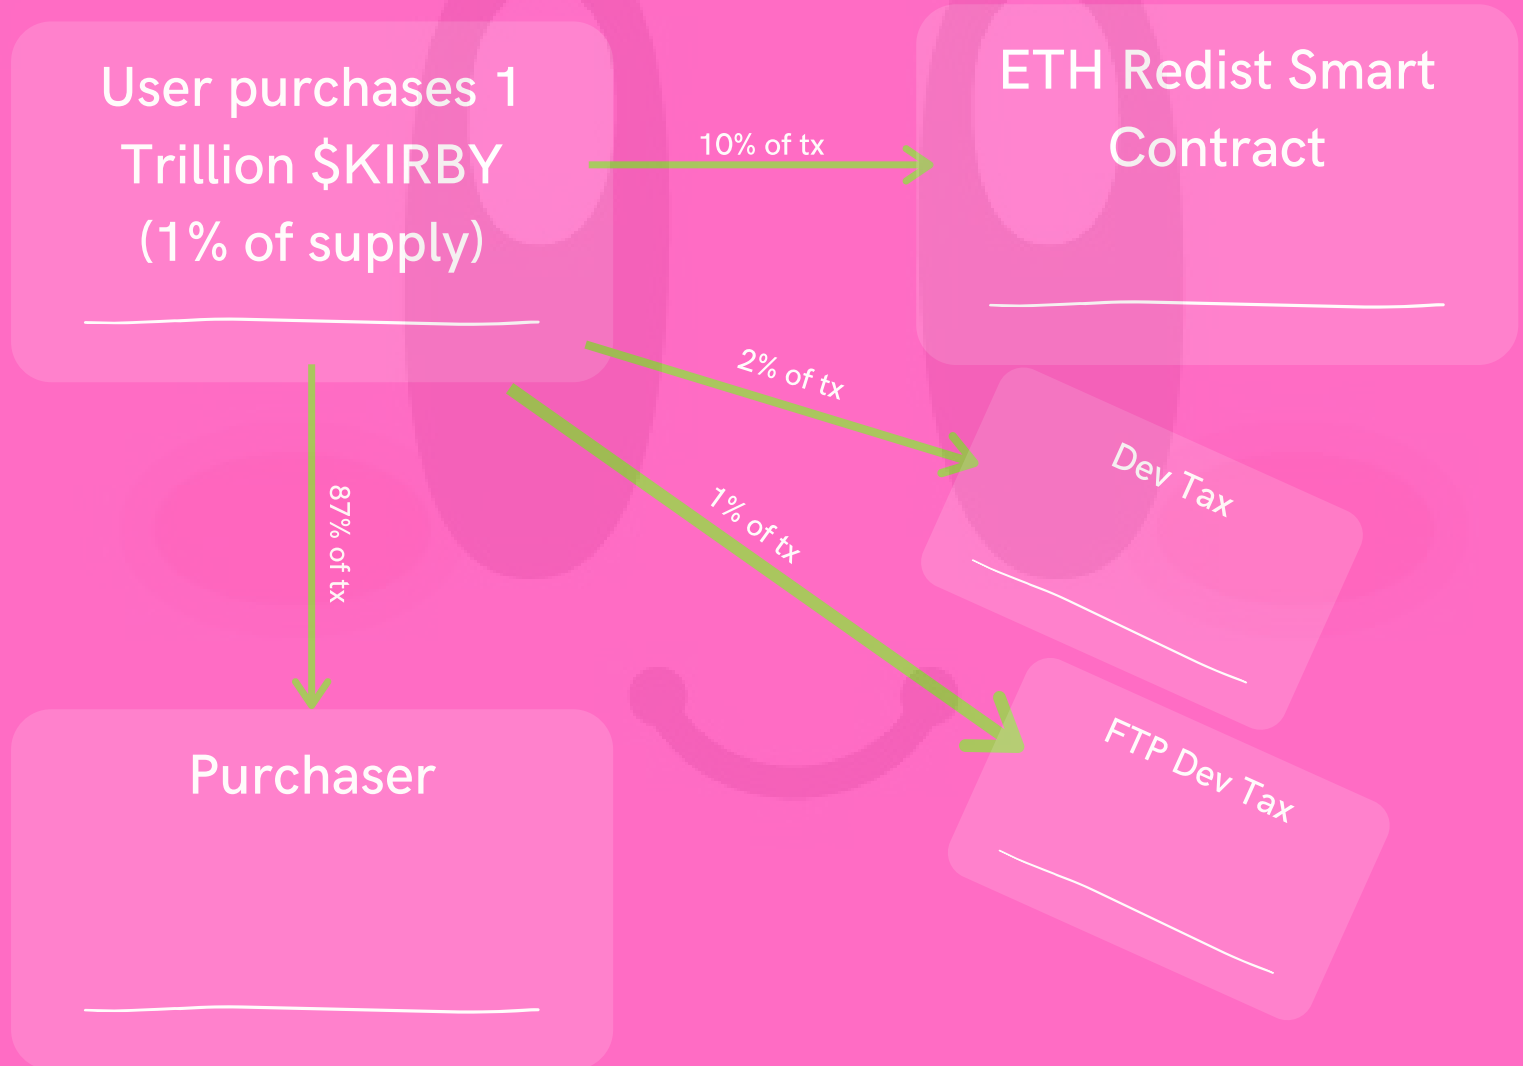

Kirby Inu

How It Works

TOKENOMICS
- 100 TRILLION TOKENS
- 10% ETH REFLECTIONS
- 2% DEV FEE
- 1% FTP DEV FEE

On every buy / sell Kirby Inu sucks up 10% of the Ethereum and stores it in FTP (Fair Token Project) proprietary Ethereum Redistribution Smart Contract. Investors earn their share based on the ratio of tokens that they currently hold at the time of a buy / sell.

For example if there was a holder with 1% of the $KIRBY supply (1 Trillion) then that holder would earn $1000 worth of Ethereum in Redistribution for every $1,000,000 in trading volume

Kirby Inu
Buy Transaction

User purchases 1 Trillion $KIRBY (1% of supply)
